

Protegra CS® RO Pure Water System

MEETING ALL PURE WATER DEMANDS

Laboratory, medical and industrial applications all need pure water in various qualities and quantities. The Protegra CS® RO Series produces pure water for a wide variety of applications by reversing the natural osmosis process to deionize water in an environmentally friendly manner. Pure water produced via reverse osmosis can be put to a number of uses in laboratories – for rinsing laboratory glassware or as feed water to autoclaves, climatized cabinets and ultrapure water systems.

The Protegra CS RO Series focuses on economic efficiency, combining a compact design with high quality components and intelligent controls. The quality of the pure water produced depends on the quality of the inlet water entering the system.

The Protegra CS RO Series is designed to produce large amounts of purified water with conductivity values depending on the salt content of the feed water (for example 1000 $\mu\text{S}/\text{cm}$ tap water quality: < 20 $\mu\text{S}/\text{cm}$ product water). The deionization rate is at least 98 %. Additional equipment, such as different tank sizes and pressure pumps, can be added to the plant according to customers' individual needs. The system can, for instance, be set up as a central water treatment plant with in a building and supplemented with accessories to form a closed circuit pipeline. All systems are equipped with an RS 232 interface.

BENEFITS

- Scope of supply includes consumables
- Compact service-friendly design, operable from all sides
- Service/maintenance report
- Made in Germany

TYPICAL APPLICATIONS

- Feed for laboratory ultrapure water systems
- General chemistry
- Laboratory washing machines
- Water for autoclaves and environmental chambers
- Buffer preparation
